

# Microsoft Task

Aldiyar Bolatov, team “Monster”

# Microsoft industry (Education)

---

- Education online
- It will Continue...
- Why?
- Equalizer

**coursera**

# Idea

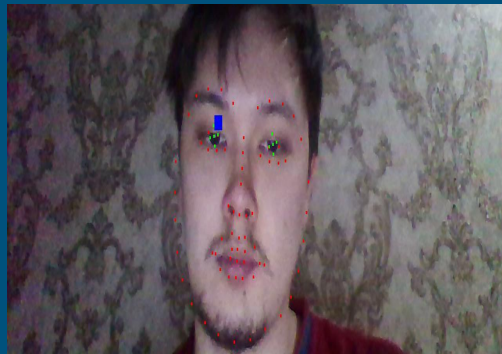

---

- Problems: Lack of communication, feedback, attentiveness
- One of the solution: Eye tracking!
- Why?
- Problem: Expensive tools
- Solution: Almost everybody have access to RGB cameras.

# Realization

---

## First part:

- Face Landmarks - DLib-Dataset
- Backbone - Mobilenet-v3 large
- Training using AdaBelief, also can benefit from SWA

## Second part:

- Eye region key point: Pupil Tracking Iris Landmarks from Google.
- Why?

# Gaze Estimation and Distance

---

# Business

---

Microsoft Azure

- Create new dataset, more lightweight structure, quantization, inference tricks, context R-CNN, gaze estimation using few-shot examples.
- Ship on Google Azure (do not have that one) + collaboration with education platforms.
- Also, can be used for more than education: scrolling phone, helping people with disabilities etc.
